Progress summary of behavior _____

Adaptive Assessment – You will need to submit scores from an adaptive behavior scale. The most commonly used are the ABAS-3 or the Vineland and, for your convenience, we included space to input the scores for either of these assessments. You can choose to use one these evaluations or an alternative evaluation (ex DAY-C, HELP, etc) in which you would need to modify the domain names below.

ABAS-3 Scoring Information

Categories	Percentile Rank	Baseline Percentile Rank Current	Classification Baseline	Classification Current
GAC				
Conceptual				
Social				
Practical				

ABAS-3 Skill Areas	Classification Baseline	Classification Current
Communication		
Community Use		
Functional Pre- Academics		
Home Living		
Health and Safety		
Leisure		
Self-Care		
Self-Direction		
Social		
Motor		

Vineland Adaptive Behavior Scales, 2nd Edition Scores:

Domain	Baseline Standard Score	Current Standard Score	95% Confidence Interval	Age Equivalent	Adaptive Level
Communication

Other					

- Baseline Standard Score- this score should never change
- Current Standard Score-The standard scores reported have an average of 100 and a standard deviation of 15.
- The confidence intervals are a range of scores that reflect a high probability that an individual’s true score falls within that range.
- Age-equivalents indicate the average age of the individual from the Vineland-II normative sample who obtained the same raw score as the individual currently being assessed.
- Adaptive bevels are scored on a 5 point scale from Low to High.
